

SPECIFICATION · MATERIALS

Material specification.

The four metals H&P fabricates in, with the properties that govern selection. Every element is made to project dimensions, finish and load case.

DATASHEET · WEATHERING STEEL		M.01
PRIMARY MATERIAL		
Corten Steel		
Weathering steel forms a stable, protective rust-like patina that removes the need for painting and deepens over time. Architects and builders choose Corten for its living finish, structural strength and exceptional outdoor durability — ideal for facades, screens, planters and sculptural elements.		
Best for	Facades, screens, planters, sculpture	
Finish	Natural weathering patina / sealed	
Maintenance	Effectively zero once stabilised	
Lifespan	Decades in exterior applications	

DATASHEET · LIGHTWEIGHT ALLOY		M.02
LIGHTWEIGHT & VERSATILE		
Aluminium		
Corrosion-resistant and light without sacrificing rigidity, aluminium is ideal where weight, large spans or a wide colour range matter. It accepts powder-coat and anodised finishes across the full spectrum, making it a favourite for perforated facade systems and screening.		
Best for	Perforated facades, screens, large panels	
Finish	Powder-coat, anodised, mill	
Weight	~⅓ the weight of steel	
Maintenance	Low – naturally corrosion-resistant	

PRECISION & LONGEVITY

Stainless Steel

Where a crisp, contemporary finish and long service life are essential, stainless delivers. Its strength and corrosion resistance make it the standard for railings, guardrails and stair systems in high-traffic commercial and hospitality settings.

Best for	Railings, guardrails, stair systems
Finish	Brushed, mirror, bead-blast
Strength	High tensile, code-rated connections
Maintenance	Low – wipe-clean surface

WHEN APPLICABLE

Carbon Steel

For structural and back-of-house elements where strength and cost efficiency lead, carbon steel is specified with protective coating systems. Frequently used for concealed framing, sub-structures and fabricated supports behind finished panels.

Best for	Structure, framing, supports
Finish	Primed, painted, galvanised
Strength	Very high – structural grade
Maintenance	Depends on coating system

Specifying: quote the sheet reference (e.g. M.01) with your required dimensions, finish and load case. H&P issues shop drawings for sign-off before any material is cut.
